

## Innovation System

Innovation system answers the question how to do the innovations, so they are long-term and efficient. Innovation management is necessary to be integrated into all departments and to be used for maintenance, management, and the development of innovative company performance. Together we will focus on development of necessary infrastructure across your company starting with strategy, through selection of suitable innovation projects up to the motivation and development of employees.

**Innovative activities themselves will not be efficient unless building up the company innovative system.**

### Typical cases

- Cost saving systems (Lean, Cost saving) and continual improvement (Kaizen) have brought tangible benefits, but the company does not expand.
- You want to make innovation, but you do not know where to start and how to manage it systematically.
- You require a look for new resources of income, new customers, new products and services.
- You are not satisfied with the current innovation performance, need to stimulate the process of innovation, be more effective in searching for projects and return of deposit investments.

### Benefits

- Building up a new innovation infrastructure and its implementation.
- Complex diagnosis of innovation performances in the company.
- Design and testing of the project, concerning innovation introduction under company terms.
- Active risk management in an innovation system of the company.
- Introduction of innovation as a new management agenda connected with remuneration and the motivation of employees.
